Ms. Donna R. Sercy
Secretary, Federal Communications Commission
1919 M St. NW
Washington, DC 20554

Dear Secretary Sercy;

I wish to voice strong support for RM:7869. There is a definite need for a well defined area for weak signal (A) and A3J (forget the current designator)) in the lower portion of not only the 222MHz Amateur band, but all of the Amateur bands.

Wideband signals, generally referred to as FM, destroy any possibility of weak signal experimental work.

RM7869 proposes a 150KHz segment of a 3MHz band to be allocated to this experimental work - that I strongly support. It is my sincere hope that the Commission rules in favor of RM 7869.

Respectfully,
